**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The only disclosure relating to associating a connection in a plug with an electrode is detailed at page 11, lines 10-32 of the specification. At page 11, line 13-16, the specification states that "known techniques would involve ... removal of the insulation followed by identification of the appropriate conducting wire at the proximal connector 79." There is no disclosure of applying, detecting, and identifying as set forth in claim 2. Further, the remainder of the paragraph on page 11 describes methodology for determining where an electrode may be created and the subsequent creation of the electrode. The steps of applying, detecting, and identifying as set forth in claim 1 are not disclosed. Since this application is a division of 08/387,832, the methods set forth in the claims fail to be supported by the original disclosure
